Replit build instruction (1 paragraph)

Build a **2-page marketing website** for **Vayom AI** with routes **/** (Home) and **/markets** (Solutions). Use the provided **stacked wordmark SVG** as the header logo and the provided **favicon SVG named icon** as the site favicon. Keep the design enterprise-clean (lots of whitespace, strong typography, neutral background), and implement each section below as a simple block: **headline + 1 short paragraph + bullets + CTA**. The **/markets** page is the core page and every section on it is a **market** (B2C, B2B, RIAA, Business Functions) with anchor links in the navigation. For visuals, avoid abstract art: use a **product UI mock** (search bar + results with clickable "source" chips) and a small **"connected sources" logo strip**.

Global navigation and site structure

[HERO SYSTEM] Header (appears on all pages)

- Left: **Vayom AI logo**
- Middle: navigation links
- Right: primary CTA button

[NAV ITEM] Home

- Label: **Home**
- Link: **/**

[NAV ITEM] Markets

- Label: **Markets**
- Link: **/markets**

[SUB MENU] Markets dropdown (anchors on /markets)

- **B2C** → /markets#b2c
- **B2B** → /markets#b2b
- **RIAA** → /markets#riaa
- **Business Functions** → /markets#business-functions

[NAV ITEM] How it works

- Label: **How it works**
- Link: /#how-it-works

[NAV ITEM] Contact

- Label: **Contact**
- Link: /#contact

Primary CTA button (header)

- Button text: **Request a workflow demo**
- Link: /#contact

HOME PAGE HERO AND NEXT SECTION (NEW BUILD INSTRUCTIONS FOR REPLIT)

1. **Build the Hero as a 2-slide carousel**

- **Create a full-width hero carousel at the top of the Home page, directly under the fixed header/navigation.**
- **Use a 2-column layout for each slide:**
    - **Left column: headline, subheadline, CTAs, trust line**
    - **Right column: slide visual (mock or brand panel)**
- **Keep both slides the same height and spacing so the page does not jump when slides change.**
- **Add carousel controls:**
    - **Left/right arrows**
    - **Pagination dots**
    - **Keyboard navigation**
- **Auto-rotate every 7 seconds.**
- **Pause auto-rotation on hover and after any manual interaction.**

2. **Slide 1 content (Hero)**
   Headline (H1)
   Ask once. Get evidence-linked answers across your systems.

Subheadline (1 line)
Stop reconciling NetSuite, Salesforce, and contract documents by hand. Get one answer with clickable sources.

Primary CTA (button)
Request a workflow demo

Secondary CTA (button)
Explore markets

Trust line (small text)
Deploy as SaaS or in your VPC. Start with one scoped workflow in 6 to 12 weeks.

Right-side visual requirements (product UI mock)
Create a clean product UI mock that includes:

- **A single question input with this example text:**
  Which customers are billed on outdated pricing?
- **A results list with "Source" chips on each result:**
  ERP record, CRM account, Contract excerpt
- **A small "View excerpt" drawer panel that opens on the right to reinforce evidence.**

3. **Slide 2 content (Brand and mission)**
   Headline (H1)
   Infinite space for better decisions.

Subheadline (1 line)
From Sanskrit "Vyoma" meaning infinite space, boundless, sky.

Primary CTA (button)
Request a workflow demo

Secondary CTA (button)
Explore markets

Trust line (small text)
Fortune 500-grade intelligence at middle-market pricing.

Right-side visual requirements (brand panel)

- **Use the Vayom AI logo mark prominently.**
- **Add a subtle "boundless sky" background texture or gradient.**

- **Keep it clean and premium. Do not use abstract illustrations.**

4. **Create a "Why Vayom" section directly under the carousel (not inside the carousel)**
   Placement

- **This section must appear immediately below the hero carousel.**
- **It must appear before the next section titled:**
  Answers are scattered. Teams pay for it in time and drift.

Layout

- **Two-column section:**
  - **Left column: text content below**
  - **Right column: brand panel (logo + subtle sky gradient)**

Content (left column)
H2: Why Vayom
Short line: From Sanskrit "Vyoma" meaning infinite space, boundless, sky.

Paragraph

Vayom AI is built on one simple belief: the best business decisions should not require Fortune 500 budgets or months of integration. "Vyoma" means infinite space, and it reflects what we deliver: evidence-linked answers across your systems and documents, so teams can move from question to verified action without friction.

H3: Our mission
Bullets

- **Enterprise-grade intelligence at middle-market pricing**
- **Cross-functional workflows with minimal data engineering**
- **Built for both B2B and B2C operations on one platform**
- **Evidence-linked outputs so teams can verify and act quickly**
- **SaaS or VPC deployment for control and scale**

Tagline (standalone line)
The sky is no longer the limit.

Right column visual instruction (brand panel)

- **Show the Vayom AI logo mark.**
- **Use a subtle "boundless sky" gradient or texture as the background.**
- **No abstract artwork. Keep it modern, minimal, and enterprise-grade.**

Section: The problem (short, scannable)

Headline (H2): Answers are scattered. Teams pay for it in time and drift.
Bullets (max 4):

- Terms live in documents. Transactions live in systems. Verification becomes slow and inconsistent.
- Teams export data, reconcile manually, and operate in spreadsheets.
- Critical checks slip until close, renewals, or audits force a fire drill.
- Decisions get delayed because no one can prove the "why" behind the numbers.

Section: What Vayom AI delivers

Headline (H2): One interface for databases, documents, and recurring updates
Bullets (max 4):

- Search across ERP, CRM, contract PDFs, and shared reports in one place
- Every output includes **clickable source references** to the exact record or excerpt used
- Works on top of what you already run. No rip-and-replace
- Designed to show measurable value in weeks, not quarters

Section: Meet RIAA: Revenue Intelligence Agentic Atlas

Headline (H2): Launch in weeks. Improve continuously.
Short paragraph:
RIAA is the platform behind Vayom AI. It connects your systems and documents, links

every result back to proof, and turns "we think" into "we can show." The goal is simple: stop sending cash out the door because the evidence was trapped in silos.

What RIAA connects (3 chips or icons):

- **Systems: ERP and CRM records**
- **Documents: contracts, amendments, policies**
- **Feeds: recurring reports, operational updates, press releases**

How RIAA works (3 compact cards):

1. **Pre-built connectors bring in structured records and key metadata without rip-and-replace.**
2. **Evidence-linked answers cite the exact record or excerpt used, so reviewers can verify fast.**
3. **Specialized agents coordinate across tasks (data retrieval, domain checks, governance) so outputs are consistent and review-ready.**

What you get (tight bullet list):

- **Clickable source links on every answer (record-level and excerpt-level)**
- **Cross-source linking (contract term ↔ invoice line ↔ CRM context)**
- **Review-ready outputs (owner, next action, supporting proof)**
- **SaaS or VPC deployment for control and compliance needs**

Visual instruction (Home RIAA):
Add a simple "Sources → RIAA → Outputs" diagram with three source icons on the left (ERP/CRM, Documents, Feeds) and three output tiles on the right (Evidence-linked answer, Action queue, Audit trail). Include a small "evidence chip" pattern (Record, Excerpt, Feed).

Section: How it works

Headline (H2): From question to action, with proof attached
3 steps (3 cards):

1. **Connect sources**
   Start with ERP + CRM + contract repository.
2. **Ask a question**
   Use plain language your teams already use.
3. **Act with confidence**
   Get a prioritized output with sources linked for review, approval, and follow-through.

Micro-CTA (text link): See markets →

Section: Markets (4 cards)

Headline (H2): Built for how each market actually runs
Intro (1 sentence): Pick your market to see the workflows Vayom AI supports end-to-end.

Card 1: B2C

- One-liner: Protect margin across promos, returns, shipping, and subscriptions.
- Link: /markets#b2c

Card 2: B2B

- One-liner: Keep contracts, pricing, invoices, and credits aligned before close.
- Link: /markets#b2b

Card 3: RIAA

- One-liner: Evidence-first answer system that links every result back to proof.
- Link: /markets#riaa

Card 4: Business Functions

- One-liner: Finance, Sales, Ops, and leaders get the same truth, with sources.
- Link: /markets#business-functions

Section: Why teams choose Vayom AI (benchmark section)

Headline (H2): Designed for enterprise work, not generic chat or dashboards
3 comparison cards (no competitor names):

- **Public chat tools:** Useful for general knowledge, but cannot securely connect to your ERP/CRM or show auditable proof.
- **Dashboards & BI:** Great for reporting, weak when answers require document-to-database verification.
- **Vayom AI:** Connects systems + documents + updates and returns answers with evidence links and clear follow-through.

Section: Contact (simple form)

Headline (H2): Scope a workflow and see it live
Form fields (keep minimal):

- Work email
- Company
- Primary system (dropdown): ERP (Netsuite, Xero)/ CRM (Salesforce/Zoho) /Customer Interaction – (facebook, WhatApp, Tickets)
- What do you want to answer? (single text field)

Primary CTA: Request a workflow demo - Button
Secondary CTA: Email - sales@vayomai.com **Footer microcopy:** Edison, NJ. SaaS and VPC deployment.

Assets to use (for Replit)

- Header logo: **"Full Logo, Symbol plus Wordmark, Stacked without bg(1000px).svg"**
- Favicon: **"icon ... .svg"** (use as icon.svg)

PAGE: /markets (Solutions)

[HERO SYSTEM] Markets Hero

H1: Solutions by market
Subheadline: Stop sending cash out the door. Find revenue leakage early across systems,

documents, and recurring reports.
Support line: Start with one scoped workflow. Prove value in 6–12 weeks. Deploy as SaaS or in your VPC.
Primary CTA: Request a workflow demo
Secondary CTA: Link to B2B, B2C, RIAA, Business Functions <Button with images>

Visual instruction (hero):
Create a **4-tile market selector** (B2C, B2B, RIAA, Business Functions) plus a **mock results panel** showing "Issue → Evidence link → Owner → Next action".

[SECTION NAV] Jump links (top of page, sticky on scroll)

- B2C → #b2c
- B2B → #b2b
- RIAA → #riaa
- Business Functions → #business-functions

B2C

Stop sending cash out the door in high-volume commerce

B2C leakage is rarely one big mistake. It is thousands of small ones: promo stacking, duplicate charges, inconsistent refunds, shipping cost drift, and subscription billing noise. Vayom AI highlights the exact transactions driving margin loss, with evidence you can click back to.

Visual instruction (B2C section header):
Add a **"Leakage map" visual**: a simple horizontal flow (Promo → Checkout → Fulfillment → Returns → Subscription) with small red markers where leakage commonly occurs.

B2C Function 1: Promo and discount integrity

Promo stacking and policy drift quietly push margin down. This workflow shows where discounts exceed policy, where promo codes are abused, and where channel pricing breaks consistency.

- It surfaces orders where applied discounts do not align to your current promo rules and eligibility.
- It groups repeat patterns by code, customer segment, product, and channel so teams fix root cause, not one-off incidents.
- It outputs a clean list of "what happened, where, and why," ready for merchandising or finance review.

Visual instruction:
Use a **"Promo audit" card** with a mini table: *Order ID* | *Code* | *Expected discount* | *Applied discount* | *Variance*, plus a right-side drawer titled "Policy reference".

B2C Function 2: Duplicate charges and duplicate refunds

High volume payment retries, gateway timeouts, and repeat submissions can create duplicate charges or duplicate refunds. This workflow prevents cash from leaving twice for the same event.

- It identifies potential duplicates across payment processors and order systems, even when references differ.
- It ties each flagged item to the original order, payment event, and refund transaction for fast confirmation.
- It reduces customer frustration and reconciliation workload by routing only high-confidence exceptions to review.

Visual instruction:
Use a **side-by-side "Match view"**: left panel "Original transaction" and right panel "Potential duplicate," with a prominent "Same customer / same amount / close timestamp" match summary.

B2C Function 3: Returns and refund accuracy

Returns are where margin disappears if reasons, policies, and outcomes are inconsistent. This workflow highlights repeat refunds, out-of-policy approvals, and patterns that increase return-to-origin events.

- It summarizes return reasons and outcomes with clear evidence for each case.

- It highlights outliers by product, warehouse, carrier route, and customer segment so operations can intervene.
- It flags cases that should be investigated for repeat behavior, process gaps, or policy misalignment.

Visual instruction:
Use a **returns "reason-to-cost" dashboard tile**: a simple bar list (Reason → Total refund amount → Return rate) with a click-through to a case list.

B2C Function 4: Shipping cost and fulfillment leakage

Shipping overcharges and fulfillment mismatches quietly drain cash. This workflow compares expected vs actual shipping costs and catches fulfillment errors that create avoidable reships and credits.

- It finds shipments where carrier charges exceed expected rates based on zone, weight, and service level.
- It highlights fulfillment exceptions (split shipments, wrong service level, late delivery patterns) tied to refund or credit impact.
- It outputs an action list for logistics teams: dispute, renegotiate, or tighten shipping rules.

Visual instruction:
Use a **carrier invoice reconciliation visual**: "Expected vs Actual" with a variance column, plus filters for Carrier, Service Level, and Zone.

B2C Function 5: Subscription billing hygiene

Subscription businesses leak cash through failed renewals, duplicate retries, misapplied credits, and mismatched plan terms. This workflow highlights billing noise that reduces retained revenue.

- It identifies renewals that failed, repeated charge attempts, and subscriptions that received duplicate credits.
- It groups issues by plan, cohort, and payment method so teams can fix the biggest drivers first.
- It creates a prioritized "recover now" list and a separate "prevent next cycle" list.

Visual instruction:
Use a **subscription "health grid"**: cards for *Failed renewals*, *Duplicate retries*, *Credit issues*, each opening a drill-down list with evidence links.

B2C Function 6: Customer service impact mapping

Support tickets, chats, and complaints are early indicators of future refunds and churn. This workflow connects service signals to measurable revenue impact so teams act earlier.

- It links common complaint themes to downstream outcomes like refunds, chargebacks, and cancellations.
- It highlights accounts and products with rising service friction before costs spike.
- It produces a weekly "top drivers" summary with drill-down to the supporting interactions.

Visual instruction:
Use a **"Service-to-impact" Sankey-style mock** (no complex charting needed): Complaint theme → Refunds / Returns / Cancellations, with clickable counts.

B2B

Stop sending cash out the door across contracts, pricing, and billing

In B2B, cash walks out the door when contract terms live in PDFs, pricing lives in spreadsheets, and invoices live in ERP. Vayom AI brings them together so teams can spot leakage early, fix it before close, and keep a clean trail of proof.

Visual instruction (B2B section header):
Add a **"Deal-to-cash timeline" visual**: Deal → Contract → Order → Invoice → Payment, with small callouts at each step (Pricing drift, Duplicate credits, Deductions, Rebate errors).

B2B Function 1: Contract-to-invoice compliance

This workflow confirms that what you billed matches what you agreed to. It highlights pricing drift, expired discounts, missed surcharges, and exceptions that never had approval.

- It shows the relevant contract excerpt next to the invoice line item that deviates, so teams resolve faster.
- It handles common naming variations across customers, subsidiaries, and SKUs so matches stay reliable.
- It outputs a prioritized list of issues to correct, credit, or document before financial close.

Visual instruction:
Use a **3-panel comparison view**: “Contract term” (excerpt), “ERP invoice line,” and “Variance & recommended next step,” with a “Copy evidence link” action.

B2B Function 2: Discount governance and deal desk guardrails

Unauthorized discounts and inconsistent approvals create margin leakage deal-by-deal. This workflow surfaces discount exceptions early and makes the cumulative impact visible.

- It flags discounts that exceed policy thresholds or lack documented approval.
- It summarizes exposure by region, segment, rep, and product line to reveal repeat patterns.
- It supports faster approvals by showing exactly what changed and where it deviates.

Visual instruction:
Use a **deal review card** with: “Discount requested vs policy max,” “Approval status,” and “Margin impact,” plus a small “trend” chip showing repeat behavior for the account or rep.

B2B Function 3: Transaction deduplication (B2B)

Duplicate invoices, duplicate credits, and repeated payments are direct cash leakage. This workflow detects duplicates across AR activity and stops cash from leaving twice.

- It detects potential duplicates across invoices, credit memos, payments, and order entries, even when references do not match perfectly.
- It groups duplicates into a single review bundle with supporting record links for quick confirmation.
- It reduces write-offs and cleanup work by catching issues before they cascade into disputes.

Visual instruction:
Use a **"Duplicate cluster" visual**: one cluster card that expands to show all related transactions (Invoice A, Invoice B, Credit Memo, Payment), with a "Mark as duplicate" decision button.

B2B Function 4: Transaction validation (B2B)

Validation prevents incorrect billing before it becomes customer friction. This workflow checks invoice lines against contracted price lists, discount rules, and effective dates.

- It validates line-level price, discount, and fee logic against the active agreement for that customer.
- It highlights exceptions with the specific contract reference and the exact transaction fields that failed validation.
- It outputs an "Approve / Flag / Resolve" queue that finance and RevOps can work through quickly.

Visual instruction:
Use a **validation queue table**: "Account | Invoice | Rule violated | Evidence | Owner | Status," with a "View rule" flyout and a "View evidence" flyout.

B2B Function 5: Rebates, incentives, and deductions control

Rebate claims and deductions can quietly drain cash when eligibility and documentation are inconsistent. This workflow ties claims to contract terms and supporting records.

- It identifies claims that lack support, exceed eligibility, or do not align to the contracted program terms.
- It highlights where deductions patterns are increasing for specific accounts or product lines.
- It gives a clean package for recovery conversations: what is valid, what is not, and why.

Visual instruction:
Use a **rebate claim packet mock**: left side "Program terms summary," right side "Claim lines," and a bottom "Missing documentation" checklist.

B2B Function 6: Payment terms and cash collection leakage

Late payments, missed early-pay discounts, and inconsistent enforcement create cash flow drag. This workflow surfaces patterns early and ties them back to accounts and terms.

- It identifies early-pay discounts taken incorrectly and late-pay behavior that is trending worse.
- It highlights accounts with frequent short-pays or recurring deductions.
- It outputs a prioritized account list for AR follow-up with supporting evidence.

Visual instruction:
Use a **timeline card per account** showing "Invoice date → Due date → Payment date" with a simple "On-time / Late" badge and a link to supporting transactions.

B2B Function 7: Channel partner and distributor compliance

Channel leakage happens when partner terms, pricing, and territory rules are not consistently followed. This workflow monitors adherence and exposes exceptions.

- It flags transactions that violate channel pricing, territory, or partner agreement terms.
- It aggregates exceptions by partner, region, and product family to spot systematic drift.
- It supports partner conversations with evidence that is easy to review and share.

Visual instruction:
Use a **partner scorecard tile**: "Compliance rate," "Top violations," and "At-risk partners," each linking to exception lists.

B2B Function 8: Revenue readiness and audit trail packaging

Close gets painful when teams cannot show the "why" behind numbers. This workflow keeps revenue-relevant decisions traceable and review-ready.

- It captures a clear trail of what changed, who reviewed it, and which records support the decision.
- It helps teams resolve mismatches earlier instead of discovering them during close.

- It provides audit-ready summaries without forcing teams into spreadsheet back-and-forth.

Visual instruction:
Use an **"Evidence timeline" component**: a chronological list of actions (Detected → Reviewed → Corrected → Approved) with links to source records and excerpts.

HOME PAGE INSERT: RIAA section (place after "Answers are scattered…" and before "What Vayom AI delivers")

SOLUTIONS PAGE: RIAA

Headline (H2): RIAA: Revenue Intelligence Agentic Atlas (the core platform)
Short paragraph:
RIAA is the system that makes multi-source answers usable in real operations. It coordinates retrieval across databases, documents, and feeds, then returns results with proof attached. Teams can validate fast, act fast, and stop sending cash out the door due to slow verification and execution drift.

Technology framework (communicate "how," without noise)

RIAA is built around four platform layers (use a 4-column visual):

1. **Connect**
   Pre-built connectors for ERP/CRM, contract repositories, and recurring feeds. No rip-and-replace.
2. **Normalize**
   Align entities across sources (customers, products, subsidiaries, aliases) so cross-system linking stays reliable.
3. **Coordinate**
   A web of specialized agents handles discrete work: domain checks, data extraction, governance, and orchestration.
4. **Prove + Act**
   Every output includes evidence links, a clear rationale trail, and an action-ready queue (approve, flag, resolve).

Visual instruction (Technology framework):
Create a **4-layer "platform stack" graphic** with short captions under each layer. Add a

small side callout: “Patent-pending multi-modal architecture for coordinated extraction across databases, documents, and feeds.”

Provenance-first outputs (what makes it enterprise-grade)

RIAA outputs are designed for reviewers, not just viewers:

- **Evidence-linked by default:** every result includes links back to the exact record or excerpt used
- **Cross-source context:** results are not isolated; they are linked across systems and documents
- **Audit-ready trail:** what was checked, what was flagged, and what was approved is preserved for follow-through
- **Permission-aware:** role-based access patterns for who can see what, aligned to enterprise expectations

Visual instruction (Provenance):
Use a **result card pattern** that always shows: “Answer summary” + “Evidence chips” (ERP record, Contract excerpt, Feed link) + “Owner / Status / Next step.”

Rapid deployment and continuous optimization (include the attached framework)

Deployment and onboarding timelines (display as an 8-card grid):

- **~3 Days:** Structured data source onboarding
  Integrate a new structured source quickly.
- **~10 mins:** Document and news feed ingestion
  Bring in new documents and updates rapidly.
- **~10 Days:** RIAA training on new sources
  Tune RIAA to perform reliably on added sources.
- **~10 Days:** Agent build and training
  Develop and train specialized agents for the workflow.
- **~6 Hours:** New user training and onboarding
  Get teams productive quickly with guided onboarding.
- **~5–10 Days:** External agent integration
  Connect to platforms like Agentforce, Azure Copilot Agent, and other enterprise agent systems.

- **~5 Days:** New entity onboarding (NER)
  Add new entities and naming patterns for consistent matching.
- **~5–10 Days:** Quarterly refinement cycles
  Regular improvement cycles to tighten outcomes and expand coverage.

Footnote (small text):
All timeframes refer to business days.

Visual instruction (Timelines):
Design the 8 items as **uniform cards** with the time in large type, a short title, then a single sentence (no long bullets). Add a small footer tag on the grid: "Rapid Deployment & Continuous Optimization."

Why it matters (tie to outcomes)

RIAA is optimized for outcomes that teams can measure:

- Faster verification when terms are in documents and transactions are in systems
- Fewer avoidable leakage events because exceptions are surfaced earlier
- Less spreadsheet-driven reconciliation and fewer handoff failures
- Stronger internal alignment because everyone can see the same proof

CTA (end of RIAA section):
Request a workflow demo (button)
Secondary link: **See Markets →**

BUSINESS FUNCTIONS PAGE (Route: /functions or /business-functions)

Replit build instruction (1 paragraph)

Create a standalone page titled **Business Functions** linked from the main navigation and also as a sub-item under Markets. Use a **sticky on-page jump bar** (Finance, RevOps, Sales, Marketing, Operations, Leadership, IT/Security). Each function section should use the same layout: **H2 + 2 short paragraphs + "Common workflows" list + "Outputs" list + Visual instruction + CTA**. Keep the page scannable, enterprise-clean, and include one consistent UI pattern across the page: **Issue list → Evidence chips → Owner → Next action**.

[HERO SYSTEM] Page hero

H1: Business Functions
Subheadline: One truth across teams, with proof attached. Reduce leakage, speed up reviews, and eliminate spreadsheet handoffs.
Support line: Built on RIAA (Revenue Intelligence Agentic Atlas). Deploy as SaaS or in your VPC.

Primary CTA: Request a workflow demo
Secondary CTA: See how RIAA works

Visual instruction (hero):
Show a **role-based "workbench" mock** with a role selector (Finance, RevOps, Sales) and the same issue list re-rendered with role-appropriate columns.

[SECTION] Why this page exists

H2: Different teams, same problem: the evidence is scattered
Finance, commercial ops, and leadership often chase the same question across different tools and files. Time gets spent reconciling, not resolving. This page shows how each function uses the same RIAA foundation to move from question to verified action.

Visual instruction:
A simple **3-column strip** labeled: Systems (ERP/CRM) + Documents (Contracts/Policies) + Feeds (Updates/Reports) → "Verified outputs".

[HERO SYSTEM] Sticky jump bar (anchors)

- Finance → #finance
- RevOps & Deal Desk → #revops
- Sales → #sales
- Marketing → #marketing
- Operations → #operations
- Leadership → #leadership
- IT & Security → #it-security

FINANCE

H2: Finance: close-ready answers with a clean evidence trail
Finance teams lose days to reconciliation when contract terms, billing activity, credits, and deductions live in different places. RIAA brings the proof into one view so review cycles compress and leakage gets caught earlier.

This is designed for action, not reporting. Every flagged item carries its supporting records and excerpts, plus an owner and next step, so teams can resolve, document, and move on.

Common workflows

- Contract-to-invoice compliance checks (terms, effective dates, exceptions)
- Duplicate credits, duplicate payments, and repeated adjustments review
- Deductions and claims packaging (what is valid, what is not, and why)
- Close readiness queue (items that must be fixed or documented before close)

Outputs Finance gets

- A prioritized exception queue with **evidence links**
- A reviewable packet for each issue (records + excerpts)
- A resolution trail: detected → reviewed → corrected → approved

Visual instruction (Finance section):
Use a **Close Readiness Queue** table: *Account* | *Amount* | *Issue type* | *Evidence chips* | *Owner* | *Status* | *Due date* with a right-side drawer titled "Source record + Source excerpt".

CTA (inline): Request a workflow demo

REVOPS & DEAL DESK

H2: RevOps & Deal Desk: keep pricing and approvals consistent at scale
RevOps teams manage guardrails, not just exceptions. RIAA highlights where pricing drift, discount exceptions, and approval gaps are creating margin leakage, then makes the "why" immediately reviewable.

This helps standardize execution across regions and teams without forcing every check into manual review. The output is a consistent workflow: flag, verify, approve, resolve.

Common workflows

- Discount governance (policy thresholds, approvals, non-standard exceptions)

- Transaction validation against price lists and effective dates
- Deal-to-cash alignment checks before close (terms → invoice → payment patterns)
- Root-cause summaries (where drift is repeating and why)

Outputs RevOps gets

- An exception list grouped by rep, region, product, and account
- Approval-ready summaries with supporting proof
- Prevent-next-cycle recommendations (what to tighten in process)

Visual instruction (RevOps section):
Use a **Deal Guardrails card** with: "Policy threshold", "Requested vs allowed", "Approval status", "Impact", plus an expandable "Evidence" area.

CTA (inline): See markets for B2B workflows

SALES

H2: Sales: account answers you can trust, tied back to sources
Sales teams need fast clarity without chasing internal threads and outdated notes. RIAA unifies account context across CRM fields, contract terms, and recent updates, then shows the supporting proof so reps act with confidence.

This is especially valuable in renewals and expansions, where pricing, terms, and recent account changes directly impact outcomes.

Common workflows

- Renewal prep: current terms, exceptions, and billing signals in one view
- Account brief: key changes from updates and internal notes, with references
- Deal risk checks: non-standard terms, pricing exceptions, missing approvals
- Stakeholder alignment: shareable summaries with clickable sources

Outputs Sales gets

- A "one-page account brief" that is source-linked
- A renewal checklist with what to confirm and where the proof is
- A clean escalation package when exceptions are needed

Visual instruction (Sales section):
Use a **Shareable Account Brief** layout: Summary at top, “Key terms” and “Recent changes” blocks, then “Evidence chips” under each item.

CTA (inline): Request a workflow demo

MARKETING

H2: Marketing: target with consistent signals, not guesswork
Marketing performance improves when targeting is aligned to reality: what customers bought, what they are contracted for, and what changed recently. RIAA keeps signals consistent by tying each insight to a source.

This enables cleaner segmentation, stronger account-based programs, and faster response to market-moving events.

Common workflows

- Account segmentation using consistent, source-backed criteria
- Trigger monitoring from updates and recurring reports (new launches, partnerships, changes)
- Campaign readiness: validate account lists against current status and terms
- Messaging alignment: ensure claims and offers match active agreements

Outputs Marketing gets

- A “target account triggers” feed with references
- Segment lists with explainable inclusion logic
- A shared view that Sales and Marketing can align on quickly

Visual instruction (Marketing section):
Use a **Trigger Feed + Segment Builder** mock: left side feed items, right side segment list, with “Evidence” links on each trigger.

CTA (inline): See Business Functions in action

OPERATIONS

H2: Operations: link operational events to financial impact
Operational friction becomes financial leakage when the connection is not visible. RIAA ties service issues, fulfillment exceptions, and recurring operational signals to the downstream impact, with evidence.

This helps ops teams prioritize fixes that reduce real costs, not just noise.

Common workflows

- Exception tracking: recurring issues tied to credits, refunds, or deductions
- Fulfillment and service mismatch investigations with supporting records
- Root cause grouping by warehouse, route, product, or partner
- Action routing: who owns the fix and what proof supports it

Outputs Operations gets

- A ranked list of operational issues by financial impact
- Drill-down to supporting records and related cases
- A repeat-pattern view to prevent the next cycle

Visual instruction (Operations section):
Use an **Issue-to-Impact map**: Issue category → impacted transactions → total impact, with click-through lists and evidence chips.

CTA (inline): Request a workflow demo

LEADERSHIP

H2: Leadership: a clear view of leakage, owners, and outcomes
Leadership needs clarity without debate. RIAA provides a consistent executive view of where leakage is occurring, what actions are underway, and what changed.

This is not a dashboard of static numbers. It is an operating view: what is verified, what is unresolved, and what will move outcomes this quarter.

Common workflows

- Leakage overview by category (pricing drift, duplicates, deductions, exceptions)
- “Top 10” action list with owners and due dates

- Trend view: what is getting better and what is recurring
- Board-ready summaries with source-backed evidence

Outputs Leadership gets

- A weekly operating summary with drill-down proof
- Clear accountability: owner, status, next step
- A consistent narrative for finance and commercial alignment

Visual instruction (Leadership section):
Use an **Executive Cockpit** with three tiles: “Total exposure”, “Resolved this month”, “Top recurring drivers”, plus a “Top actions” list.

CTA (inline): See how RIAA works

IT & SECURITY

H2: IT & Security: controlled access, governed outputs, flexible deployment
RIAA is designed to fit enterprise control expectations. It supports role-based access patterns and deployment options that match your environment requirements.

Teams get value without opening uncontrolled paths to sensitive systems. Outputs stay tied to approved sources and reviewers.

Common workflows

- Source connection governance (what’s connected, who can access what)
- Permissions and role mapping by team and function
- Deployment planning: SaaS or VPC
- Operational monitoring: usage, workflows, and adoption reporting

Outputs IT/Security gets

- A clear access model aligned to roles
- Traceable usage and activity patterns
- Deployment options that fit internal requirements

Visual instruction (IT/Security section):
Use a **Permissions + Sources console**: connected sources list, role selector, and a small "Activity timeline" panel.

CTA (inline): Request a workflow demo

[SECTION] Shared foundation across every function

H2: The same output pattern, everywhere
No matter the function, RIAA standardizes the output so teams do not reinvent workflows each time.

Standard output components (3 cards):

1. **Issue list** (prioritized, grouped, assignable)
2. **Evidence links** (record and excerpt references)
3. **Next actions** (approve, flag, resolve, document)

Visual instruction:
Show the **same issue card** three times with different role views (Finance vs Sales vs Leadership), changing only columns and labels.

[HERO SYSTEM] Bottom CTA strip

H2: Launch in weeks. Improve continuously.
Body (1 sentence): Start with one workflow for one team, then expand once trust is established.
Primary CTA: Request a workflow demo
Secondary CTA: Explore Markets

Bottom CTA strip (end of /markets)

Headline: Start with one workflow. Stop sending cash out the door this quarter.
Primary CTA: Request a workflow demo
Secondary CTA: Email viren.shah@vayomai.com
